Eastchester NY | (914) 646-9692 | matthew.persico@gmail.com | <https://urlinfo/1lMq->

Summary

Senior Software Engineer with 30+ years of experience building, modernizing, and scaling mission-critical financial systems across global financial institutions. Expert in software development, ETL pipelines, distributed systems, and database performance optimization. Proven success transforming legacy monolithic platforms into modular architectures, improving system reliability, deployment speed, and data integrity. Extensive background in Perl, SQL, Linux, Python, C/C++, and UNIX environments, supporting high-volume financial data pipelines and enterprise infrastructure.

Skills

- | | |
|------------------------------------|---|
| • Perl Engineering | • Distributed Systems Architecture |
| • SQL & Database Engineering | • Financial Data Systems |
| • ETL Pipeline Development | • DevOps & Deployment Automation |
| • Linux / UNIX Systems Programming | • Job Scheduling & Workflow Automation |
| • Python Development | • Data Integrity & Performance Optimization |
| • C / C++ Programming | • Software Modernization & Legacy Migration |
-

Experience

Bloomberg 07/2015 to 08/2025

Senior Software Engineer

- Led migration of mission-critical automation platform from Perl to Python, enabling incremental modernization while maintaining system uptime across global production infrastructure.
- Redesigned internal software distribution system (BPKGMOVE), modularizing monolithic scripts into reusable modules and improving maintainability while accelerating deployment reliability.
- Implemented parallelized distribution tasks, reducing global software rollout times by up to 12 hours and improving deployment throughput across thousands of servers.
- Developed simplified BAS inter-process API framework, reducing engineering development time for messaging integrations and improving performance through connection caching.

Wall Street Asset Management Firm

07/2013 to 06/2015

Software Developer / Infrastructure Engineer

- Developed cross-platform utilities enabling task coordination between AutoSys and Opswise schedulers, allowing incremental migration without disrupting production workflows.
- Automated server and client deployment processes, reducing installation times and eliminating manual configuration errors across enterprise infrastructure.
- Implemented dual-vault compatibility enabling simultaneous support for legacy password vault and CyberArk, allowing seamless enterprise security migration.
- Standardized company-wide Perl deployment architecture, including automated CPAN installations and cross-platform releases for Solaris, Linux, and Windows environments.

Oreste Software, Inc.

07/2013 to 06/2015

Founder / Software Developer

- Founded consulting firm delivering enterprise infrastructure development and automation solutions for financial institutions managing thousands of batch workloads.
- Led enterprise migration from AutoSys v4 to Stonebranch UAC, designing architecture supporting 17,000+ automated tasks across production environments.
- Built automated utilities converting AutoSys workflows into UAC workflows, reducing manual conversion risk and accelerating migration timelines.
- Designed disaster recovery (DR) and high-availability architecture, enabling automatic failover and ensuring business continuity for mission-critical processing systems.

Knight Capital Americas

08/2012 to 06/2013

Vice President – Electronic Trading Data Group

- Developed GUNDY securities reference data platform, replacing fragmented data-loading scripts with centralized workflows improving data quality and operational consistency.
- Engineered automated conflict detection algorithms for vendor data ingestion, enabling user-driven resolution workflows and improving data accuracy.
- Designed release management framework for Oracle database objects, improving deployment reliability across trading infrastructure systems.
- Contributed to enterprise data strategy consolidating multiple trading data acquisition pipelines into unified architecture.

Goldman Sachs

02/2010 to 08/2012

Vice President – Core Strategies Group

- Engineered ETL pipeline ingesting Thomson Reuters I/B/E/S financial estimates, supporting five daily incremental loads and monthly full refreshes into Sybase databases.
- Developed scalable VLF ETL framework separating parsing and loading stages, enabling simultaneous multi-destination database ingestion and improved throughput.
- Built log ingestion pipeline for GsLog, enabling analytics on operational logs by migrating data to Sybase IQ data warehouse for data mining.
- Re-architected vendor ingestion platform supporting multi-vendor data pipelines, allowing rapid onboarding through configuration instead of code development.

State Street Investment Management Services

08/2008 to 01/2010

Senior Programming Consultant / Vice President

- Designed architecture for Lazard Data Warehouse, enabling daily calculation of periodic investment performance metrics across large financial datasets.
- Engineered database purge framework deleting 2.7M legacy records without downtime, avoiding transaction log overflow and protecting production systems.
- Developed high-speed data reorganization pipeline for 36M-row Sybase tables, completing maintenance within strict production windows.
- Implemented side-by-side Perl version upgrade architecture, enabling safe migration across enterprise systems without disrupting production workloads.

ADDITIONAL EXPERIENCE

Lazard Asset Management

Senior Programmer / Technical Consultant

May 1998 – August 2008

Instinet

Project Manager – Clearing & Settlement Systems

August 1993 – May 1998

Merrill Lynch

Senior Analyst – Debt Markets Technology

May 1992 – August 1993

Bear Stearns

Applications Programmer – Fixed Income Analytics

August 1989 – May 1992

Citicorp

Systems Officer – Institutional Banking Technology

June 1987 – August 1989

EDUCATION

The Cooper Union for the Advancement of Science and Art

Bachelor of Science – Engineering (Computer Engineering)

New York, NY

GPA: 3.3 / 4.0
